WINKELMANN Circumcision Clamp

Catalog Number	Diameter (mm)
PMSEF965R	12
PMSEF966R	16
PMSEF967R	20

Assisted by two hemostats or ligatures the foreskin is pushed over the bell-shaped protection rod and the glans is placed into it. Next, the wing-nut is tightened as close as possible, so the foreskin is annular compressed. The foreskin is cut off with a scalpel adjacent to the compression ring. The circumcision clamp remains in place for a few minutes to avoid bleeding. If any large vein, specially the frenular artery, is cut, a ligature must be set. The advantage of the method described is the cosmetically favorable scar which is left after rejection of the small necrotized portion.
